DETAILED ACTION

This Office action is in response to Applicants' response filed on August 20, 2003.

The indicated allowability of claims 155, 160, 165, 170, 176, and 182 is withdrawn in view of the newly discovered reference(s) to Yamazaki et al., U.S. Patent 6,566,175. Rejections based on the newly cited reference(s) follow.

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 08/330,797, filed on October 28, 1994.

Drawings

The drawings filed on October 28, 1994, have been objected to by the Draftsperson; note the form PTO-948 attached to Paper No. 4.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible

Art Unit: 2822

harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 154-186 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 3, 4, 7, 8, 9, 10, 13-16, 19-21, 23, 24, 26-28, 30, and 32 of U.S. Patent No. 6,329,229, in view of Yamazaki et al., U.S. Patent 6,566,175, newly cited. Although the conflicting claims are not identical, they are not patentably distinct from each other because the method of the instant claims encompasses the methods of the patented claims. It is noted that only claims 13-16, 28 and 30 expressly recite a multi-chambered apparatus comprising first, second and third chambers and transporting the substrate between these chambers, however, the method of the instant claims, which require transporting the substrate between reaction chambers, can not be practiced without infringing the other claims of the patent which do not require a multi-chambered apparatus or the transporting of the substrate.

Art Unit: 2822

chamber.

Applicants have argued that although the claims of the Yamazaki '229 Patent may recite the formation of an insulating film on the semiconductor film, the claims of Yamazaki '229 do not recite forming a gate insulating film, as the present claims require. Yamazaki '175 discloses a method of fabricating a thin film transistor in which a gate insulating film is sputter-deposited on a crystallized silicon film in a multi-chambered apparatus, see column 12, lines 5-36. It would have been obvious to one skilled in the art that the insulating film deposited in the claimed method of Yamazaki '229 could have been used as a gate insulating film and deposited in a sputtering

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Wilczewski whose telephone number is (703) 308-2771.
